1 **NAV Estimation** - Fair value of debt refers to the market price of the debt if it is traded or, if it is not traded, an estimation of its value calculated using points over gilt methodology.
 Cum Income NAVs include net revenue in the financial year to date. All estimates are fully diluted for the effects of warrants, convertibles or treasury shares. NAV estimations are created and maintained by Morningstar. For more detailed methodology document please contact FD.Support@morningstar.com

2 **Z-Statistic 1y** - Shows whether the fund's current discount is significantly higher or lower than the average over the past year, calculated as (Current Discount - Mean) / Std Dev

3 **Gross Gearing** - The ratio of estimated gross Assets to the Net Assets, expressed as a percentage

4 **Net Gearing** - The ratio of estimated Gross Assets minus cash and fixed interest to the Net Assets, expressed as a percentage. Cash and fixed interest represents not-equity exposure.

5 **Total Expense Ratio** - (Total Expenses - Performance Fees - Cost of Leverage - Tax - Restructuring Costs) / Average Net Assets

6 **Net Dividend Yield** - This is calculated by dividing the current financial years dividends (this will include prospective dividends) by the current price.

7 **Dividend Growth** - The annualised percentage growth in dividends. Based upon the current financial year, including any future estimates or forecasts.

8 **Performance** - Calculated using start and end period Share Prices or NAV Dividends are reinvested on the ex-dividend date at the prevailing Share Price or NAV.

9 **Risk & Return** - 1 Year ex income par NAV total return performance against 1 Year NAV volatility. Please see notes 8 and 15 for performance and volatility definitions respectively.

10 **Portfolio** - In order to calculate the portfolio value we deduct any holdings in cash only (Note that Fixed Interest is not included).

11 **Alpha** - The difference between the fund's average excess total return and the benchmark's average excess total return.

12 **Beta** - The sensitivity of the fund to broad market movements. A Beta of 0.5 would imply the fund will move by half as much as the index.

13 **R-squared** - A measure of correlation between the fund and index. A value of 0.8 means that 80% of the fund's NAV changes can be explained by changes in the index.

14 **Sharpe** - A risk-adjusted return measure, calculated by dividing the fund's average monthly excess total return over the risk-free rate by the standard deviation of those returns. The figure shown is the annualized Sharpe Ratio.

15 **Volatility** - The annualized standard deviation of the logged daily returns, adjusting for distributions from capital.
